S.M. Hazrat Ali

Associate DevOps Engineer

hazrat17016@gmail.com | (+880) 1521334914 | Gazipur, Bangladesh | linkedin.com/in/smhazratali | github.com/Hazrat16

SUMMARY

Full-stack engineer with 3+ years of production experience, transitioning into DevOps and cloud infrastructure. Hands-on with AWS, Docker, Kubernetes, Terraform, Ansible, and CI/CD, with experience operating production systems and building infrastructure end-to-end.

TECHNICAL SKILLS

- **Cloud Platforms:** AWS (EC2, VPC, Security Groups, IAM, EKS, ECR, Lambda, S3, DynamoDB, CloudWatch), core networking, compute, and storage concepts transferable to Azure
- **Containers and Orchestration:** Docker, Docker Compose, Kubernetes (EKS, kubectl, eksctl)
- **Infrastructure as Code and Configuration:** Terraform, Ansible (roles, playbooks)
- **CI/CD and Version Control:** Git, GitHub, GitHub Actions, GHCR (container registry), Makefiles
- **Scripting:** Bash, YAML
- **Monitoring and Security:** LogRocket, Sentry, CodeQL, Dependabot, health-check automation
- **Databases:** MongoDB, PostgreSQL

DEVOPS AND INFRASTRUCTURE PROJECTS

- **SmartJobHub: CI/CD and AWS platform for a job portal** · Github↗**:** Wrote Terraform modules for VPC, ALB, ECS Fargate, ElastiCache, Secrets Manager and CloudFront, with matching staging and production environments.Built GitHub Actions pipelines (tests, Docker build, Trivy, CodeQL) and versioned deploys: staging first, then the same image to production after approval.Used GitHub OIDC instead of static AWS keys; ECS circuit breaker rollback, smoke tests and autoscaling make deploys safe.Set up CloudWatch alarms to SNS, budget alerts, Sentry, and Prometheus, Loki and Grafana; wrote the runbook, 9 ADRs and a backup restore drill.
- **Doctor Appointment Platform** · Github↗**:** Built and managed CI/CD and AWS infrastructure for a full-stack booking platform (Next.js, Express, MongoDB). Automated TypeScript builds, CodeQL security scanning, and Docker image publishing to GitHub Container Registry (GHCR) using GitHub Actions. Provisioned AWS infrastructure (VPC, security groups, EC2) with Terraform and configured Linux hosts with Ansible, including Docker, MongoDB backups, Nginx, TLS, rolling deployments, and application health checks.
- **Kubernetes Deployment on Amazon EKS** · Github↗**:** Deployed a two-tier, MySQL-backed application to a Kubernetes cluster on Amazon EKS using kubectl and eksctl, including namespace, deployment, and service manifests; documented cluster setup and teardown to manage cloud costs.
- **Terraform AWS Networking and Compute Module** · Github↗**:** Built a modular Terraform configuration provisioning a VPC, subnets, internet gateway, route tables, security groups, and an EC2 web server, with separated backend, variables, and outputs files, and a Bash user-data script for instance bootstrapping.

WORK EXPERIENCE

Firmwide — PriceEstimator.ai

Full-Stack Engineer, May 2026 – Present, Remote

- Set up CI/CD pipelines in GitHub Actions (lint/type-check/build gates on pull requests, tag-based staging-to-production promotion) and containerized the application with multi-stage Docker builds and environment-specific Nginx reverse-proxy configurations.
- Built and optimized backend services (Node.js/Express, MongoDB, Redis) for a production billing platform, including caching strategy, JWT-based authentication, and Zod-validated APIs.
- Integrated Microsoft Graph API for secure single sign-on and automated data ingestion from Microsoft 365 mailboxes.
- Collaborated with engineering to keep deployment configurations, environment variables, and operational docs current across staging and production.

SmartCrowd

Dubai, UAE (Remote), Dec 2022 – Apr 2026

Software Engineer, Mar 2025 – Apr 2026 | Junior Software Engineer, Dec 2022 – Feb 2025

- Integrated and used observability tooling (LogRocket, Sentry) daily to monitor the platform, investigate alerts, and speed up incident resolution.
- Led end-to-end delivery of the Share Transfer Facility (STF), coordinating cross-functional teams and ensuring zero major post-release production issues in a high-volume transaction system.
- Promoted from Junior Software Engineer to Software Engineer within just over two years for leading architecture improvements and delivering fintech product features used by 10K+ active users.

EDUCATION

Mawlana Bhashani Science and Technology University

B.Sc. in Information and Communication Technology, CGPA 3.53 out of 4.00 | 2017-2022
